682 ceeded along two lines of enquiry. First, I have
674 analyzed the circumstances surrounding the
121 deaths in as many cases as my informants could remember. Variations in the components of homicidal acts—the setting, agents, purpose, and outcome—suggested the different assumptions underlying each case. Secondly, I have correlated the different kinds of homicide with structural and organizational changes in
682 the community. The analysis of cases in Sec-
674 tion I summarizes the patterned components
128 of behavior. The social environment providing the cues to the actors is explored in Section II.

682 I. THE PATTERNED COMPONENTS OF
165 37 HOMICIDE CASES[3]
[128] The following tabulations and discussion are based on the 37 cases presented in Table 1.

Who Is Killed

Sex:	all male	
Age:	18–22	5
	27–30	7
	34–38	7
	42–48	8
	50	3
	60	2
	65	2
	70	2
	??	1
Occupation:	curer	8
	political leader	1
	farmer	28

[463]

One-half the total number of killings occurred to those between the ages of 34 to 50. However, as the six victims aged 60 and over indicate, survival to a late age does not ensure that one will die a nonviolent death. The age of the victim may be correlated with motive, insofar as some events leading to conflict occur
68 only at certain times in the life cycle. Thus,
[578] betrothal conflicts involved only young men, while victims accused of witchcraft were older: 27 was the age of the youngest, and 16 out of the 18 men killed as witches were over 34. Cattle theft, on the other hand, occurred throughout the age range.

682 Eight of the victims—more than one-fifth of
165 them—were curers, a much higher proportion
756 than their share in the total population, for there are only about a dozen now living in the town center of 1,900.

682 There is a personality type recognized by the
156 community as distinctive of those who "get

682 674 75 these suspicions and kill the witch. If he should kill the witch while the patient is still alive, it is believed that the patient will die.

682 685 674 [463] [697] Killing men for cattle theft (six cases) is a relatively recent occurrence. It has put homicide on the market: the associations of cattle-owners have hired killers in three of the six cases. In addition to the killer's fee, they pay the fine to release him from prison. Fines for homicide have increased in the past five years--from 1,000 to 3,000 pesos—but not sufficiently to price the murder of cattle thieves out of the market. A good bull is worth [435] 1,500 pesos, and the threat of further loss by theft seems to justify the expenditure of fees and fines. When the cattle-owners lose some of their herd, they go to spiritualists or to San Miguel, the talking saint of Ixtapa, to find out who did the stealing. Since such evidence does not hold up in court, legal settlement is not 685 attempted. Legal action, moreover, would 694 create an enemy who might seek revenge. A Ladino secretary of the town center who had lost a bull accused a man of stealing his cattle and demanded 500 pesos in compensation. By receiving the money he jeopardized his safety, and eventually he had to leave town.

685 787 776

The Resolution of the Case

682 69 It is nearly impossible to find witnesses to homicide. Of these 37 cases, 28 resulted in no action being taken by the authorities, and in five cases where the killers went to jail, they were released with the payment of minimal fines. In the calculations of the townspeople, it is hardly worth risking one's neck to get such a minimal revenge.

682 593 626 [683] However, this does not mean that homicide goes unnoticed in the community. After a killing the widow sings of the life of the dead man. If she is in agreement with the verdict arrived at by the killer and others, she will deny knowledge of what he has done, or even suggest that she too was aware of what harm he has caused (one widow implied that her husband, killed as a witch, was responsible for the death of four of her six children). If she objects to the verdict, she sings of what a good man he was and how blameless. She will then air her own suspicions in the following weeks as to who killed her husband.

682 683 627 Following the funeral, when the women have left the cemetary, the men sit at the grave. As they measure out a liter of liquor and pass it around, they advance hypotheses as

412 (*eché*), hoe (*asron*), machete (*machit*), coa (*luk*), and digging stick (*avutel*). In a 243 few towns (Amatenango), where lands are [407] flat, the plow is made of wood and pulled by oxen but only for wheat farming. During [415] corn planting, the seed is carried by the [824] planter in a *morral* hung from the shoulder, [237] in a gourd with a large spout, or in containers made of armadillo shells. The harvested crops are placed in deep baskets, made of reed-grass, or in big pita (*chojak*) [412] net bags. The ear of corn is cleared of its [237] husk by a sharp bone or a small deer horn.

322 The axe, machete, and knife are used in
412 wood working, which is very rudimentary, though handsaw and hammer have a place. With these tools the Indians make doors, tables, seats, small benches, shelves. Blom [534] and LaFarge (1926–27, 2:351) add that the Tzeltal near Ocosingo also make violins of a shape similar to the European type, but they have no resonance and poor tone. They also manufacture pipes and combs roughly [463] finished. No village of this group has specialists in carpentry to compare with the Chamulas (Tzotzil-speaking), who supply furniture at low cost to San Cristobal de las Casas and other places of the area.

324 Stone carving requires a pickaxe with
412 one end very sharp, the other very flat to serve as a hammer, and a short wooden handle. This is the tool used in Tenejapa for making metates. These metates have three legs, but Blom and LaFarge (1926–27, 2:338) mention metates without legs (Ocosingo municipio) which are made of volcanic stone found along the San Martin River. According to the Tzeltal of Oxchuc, the name of the metate is *chá*, its handle *kab-chá*.

412 An iron bar to break the ground, an axe, and a machete are the tools for building huts, chickencoops, sweat houses, and other small structures.

283 Another tool, used in the making of pita
413 rope, is *karet*, which probably comes from the Spanish *carreta*. It consists of a wooden disc fixed to a tree trunk that is nailed to

462 All activities related to curing of disease are also performed by specialized men, though in some places women occasionally participate. Help at childbirth is always assigned to experienced female relatives; there are no professional midwives—nor professional marriage brokers. [844] [959] [584]

463 Specialization is little developed. Only in the largest centers are there a few individuals concentrated on carpentry, tailoring, trading, masonry, or some other activity. The families in Tenango and Amatenango who carry on the ceramics industry also [241]

[P. 210 - C]

463 241 handle the milpa. It is rare to find an Indian who does not have a milpa since this is the work that ensures his existence.

Property Rights

423 613 [177] [181] This is a matter that varies according to the degree of acculturation reached by the community. In the most conservative groups (Oxchuc, Cancuc, Tenejapa, Tenango) there are still family property rights, but they seem to depend on lineage rather than on the immediate family (Villa Rojas, 562 428 1947, ch. 19). As these lineages are patrilineal, a woman does not count when inheritance is involved. She can own her parcel of land only when she has saved the money to buy it, but this is not frequent. Any man can claim lands that previously belonged to his lineage; it is enough to give back the money paid for them two or three generations ago. Of course, he has to prove by witnesses or documents that those lands were the property of his lineage.

127 423 613 614 According to a document dated 1861, which I found in the possession of the Gómez Ichiloks (they belong to the Gómez clan and to the Ichilok lineage), residents of the paraje of Tzajalchen of the municipio of Oxchuc, this property system seems to be very ancient. The document is of special interest.

000 DOCUMENTO DE TIERRAS DE LOS GÓMEZ ICHILOK A

Por pedimento de los ciudadanos Domingo Gómez Ichílok, Tomás Gomez Ichílok, otro Tomás Gómez Ichílok, Miguel Gómez Ichílok, Diego Gómez Ichílok, otre, Domingo Gómez Ichílok, otro Diego Gómez Ichílok y su hijo Diego Gómez Ichilok y por último su hijo menor Manuel Gómez Ichílok, y como antiguamente se acostumbra en este pueblo que segun los hermanos de una propria família, se les demarca un retazo de terreno de ejido para que en lo sucesivo no haya pleitos con los vecinos como suele suceder, nosotros los Gobernadores, Auxíliares, Justicias, Escríbanos y Testigos, pasamos al paraje denominado Tzajalchén a

by the company truck to replenish supplies they bring with them. Most of the workers are young men in their twenties and thirties. They return Saturday evening in a truck supplied by the company and go back to work on Monday morning. Weekly wage payments have upset the usual controls over budget management. Money earned from crops is handled by women. The sawmill workers have resisted passing over their paychecks to their wives or mothers, and several court cases have been precipitated as a result (Appendix 2b).

All of the work in which men are engaged outside of the community is voluntarily undertaken for cash compensation. Formerly, forced labor of two kinds was frequently demanded of the Indians: communal labor in the neighboring ladino town when Tzo?ontahal was an *agente municipal* of that town, and work in neighboring fincas for wages of 50 cents a day. Forced communal work came to an end when the town became an independent municipio in 1931, and the labor roundups at substandard wages were ended when Indians became conscious of their rights guaranteed in the *Ley Federal del Trabajo* in the late 30s. Copies of the *Colección Juridica Ley Federal del Trabajo* are sold in the departmental marketplace along with the *Codigo Agraria*. Awareness of their rights as workers is concomitant with increasing entry into wage labor employment outside of the local community. As yet, Indians do not have any organized labor interest groups to champion their rights. The Commissioner of Indian affairs in the departmental capital is an intermediary in individual cases that arise. But wage levels and conditions of work are set in a free market in which the Indian's only control is to refuse to work.

The few special occupations in the town, such as butchering, caponizing, weaving bags, carpentry, and midwifery, have never developed into full-time professions.[2] The failure of the development of specialization is related to the tradition of ritual offerings of gifts of liquor and consumables and to the lack of a marketplace in the town.

Most of the livestock raised in the town is sold to butchers of the neighboring town because of lack of storage or of market facilities for the meat. Pigs and bulls are slaughtered in town only on the occasion of a celebra-

2. Curing is treated in a separate chapter since it is an exceptional case of specialization related to social control.

mother to her daughter. Informants are able to recount the succession of learning of the tasks, the relative difficulty of each task, and the mistakes they made and how their mother corrected them. Being a potter in Tzo'ontahal is as much a part of being a woman as the role of agriculturalist is of being a man.

Special tasks become crystallized as roles only when few people perform them. Jobs such as caponizing, butchering, net and rope weaving, and wood cutting which are done by almost every man do not have role terms. Bonesetting and curing of certain "good" illnesses, such as swelling caused by embarrassment, are semispecialized activities performed by a few women who have "cold" hands. Midwifery is a fully specialized role performed by two women who are referred to as "the grandmothers of the newborn child."

A new occupational role has been created with the purchase of a truck by Indians of the community. There are now two Indian truck drivers. Recruitment of these particular young men was a result of their fathers' importance in the truck-owning cooperatives, and their skill was acquired in apprenticeship with a Ladino truck driver hired when the truck was first in operation. Both of them are acculturated in clothing and speech. Since they have acquired skills in dealing with the Ladino world, they often act as intermediaries for Indians of the town in their negotiations in the market or the courts of the departmental capital.

The continuity in occupational adjustment from early childhood to adulthood contrasts with the discontinuities in assuming roles in the life cycle. Girls are not advised about menstruation until they see the first signs of it; they describe their reaction to it as one of fear and surprise. Often they have been pregnant several months before they are aware of the condition or its cause, and they have no preparation for the experience of childbirth before it is upon them. Boys are not considered men until they are married, but in order to arrive at this status, they must enter into the "fight to get a wife," as the betrothal is often called.

Since recruitment to roles in almost all institutional contexts is based on qualities of the person rather than acquired skills, failure to recognize the prerequisite conditions of age and experience undermines the validity of

Aguacatenango

would inherit the cattle, but there is no assurance that the animals would not rapidly die: the children may not have the father's suerte to raise cattle, but one of them may have it to grow beans.

Good suerte is a concept attached also to certain skills: if a man has that special suerte, he can have a mano fría (cold hand) which is necessary to castrate or brand animals without having their wounds get infected. In addition, a woman can become a midwife because she has the suerte to deliver babies. On the contrary, a person with bad suerte can have a mano caliente (hot hand), and be unable to carry on such tasks.[1]

Then, ideologically, people belong to two opposite categories. On the one hand, there are those with "small hearts" and witchcraft powers. On the other hand, there are good people with suerte. If a man is well thought of, the villagers say he has suerte. If they dislike him, they say he is a witch.

Every villager has to gamble carefully and weigh his odds, balancing his behavior in such a way as to avoid the "misjudgement" of his fellow villagers. The better they know and like him, the more likely it is that they would think that he has suerte. The more he creates enemies, the higher his probability of being

[1] There are many part-time specialists in the village who do their work for neighbors and relatives at irregular intervals, never as a life specialization, except in a few cases such as midwives. Women may castrate chickens, or be called in as cooks at fiesta time. Men may be good at branding horses, roofing, etc. None of these jobs contributes substantially to the household income, except for the roles of carpenter, midwife and curer. Curers, however, are a separate category altogether, being ritual specialists "known" to have metaphysical powers.
